THREATFUSION / Investigation brief

Suspicious workstation activity (training)

SYNTHETIC TRAINING CASE: fictional events and demo intelligence.

Source: synthetic-incident.log | 7 lines | 9 unique indicators

Input SHA256: f8c8f406c66a9410b268a4df3c86a73f7ff2fdf7537b38f0e7b00fdfd056b906

Created: 2026-10-14T20:20:37.636391+00:00 | Updated: 2026-10-14T20:21:33.273022+00:00

Analyst decisions: unreviewed: 8, investigate: 1, expected: 0, escalate: 0

Review priorities are unvalidated workflow hints, not automatic verdicts. Co-occurrence and keywords do not establish maliciousness.

Extraction and local keyword tags are heuristics; review original context. Relationships do not prove causality.

203.0.113.42

ipv4 | 3 sightings | Priority: high | Decision: investigate

Analyst note: Training finding: repeated blocked download events across two workstations plus a failed login. Verify endpoint process trees and whether any related connections were allowed. This is fictional evidence, not a real incident.

Why review: Non-public/reserved indicator: retained for local context; external lookup blocked

Why review: Local source contains: authentication failure, blocked event, download context; keywords alone are not proof

Why review: Appears 3 times in the imported text; repetition is not maliciousness

Why review: Multiple local activity types across repeated sightings: review the combined sequence first

Why review: SIMULATED fixture signals: abuseipdb, otx, virustotal

Why review: Connected to 4 other case indicators by source context

Enrichment DEMO: risk 76 | coverage 100% | confidence 99% | freshness 98%

virustotal: ok; retrieved 2026-10-14T20:20:42.879309+00:00

detections=48; observed 2026-10-12T20:20:42.879309+00:00; source fixture://demo/flagged

Next: Check account, host, and authentication timestamps; distinguish user error from repeated abuse

Next: Identify the originating message/process and downloaded file hash using existing logs

Next: Confirm the control blocked the event and check whether any related activity was allowed
